MINDSET INTEGRATED CO.

Simplifying complex brain science.

MINDSET™

EXECUTIVE SUMMARY

Mindset Integrated Co. (MINDSET) is a neuroimaging data collection, analysis & expert services company utilizing its proprietary quantitative analysis algorithms and forensic software with applications in three interrelated business segments. The Company is now looking for investment funds to further develop, market, and commercialize these software tools and associated services, leading to a US FDA 510(k) approval for medical use of the technology and a profitable and sustainable growing business in both the legal and medical markets.

COMPANY BACKGROUND

MINDSET is a Delaware-registered company incorporated in June 2020, and was created to bring science-based solutions to the forefront of brain injury cases using an approach that ensures data collection, specialized data analysis, and objective results. The Company is grounded in a passionate belief in harnessing the power of established brain science to design evidence-based, user-friendly tools for the clinical and legal markets, while delivering our services with a profound sense of duty to those suffering from brain injuries or brain health conditions. MINDSET specializes in scheduling, collecting, reviewing, and analyzing brain science and medical data, assisting with the admissibility of scientific evidence in legal matters, and has been providing validated brain data analysis for the legal market since 2012 as Mindset Consulting Group.

SOLUTION & BUSINESS DESCRIPTION:

Quantify® is a quantitative magnetic resonance imaging (qMRI) analysis suite that compares an individual's brain (gray and white matter) to a large, proprietary normative database of age- and sex-matched control subjects. Quantify organizes the cortical and subcortical volumetric measurements of the brain into 101 regions and measures the integrity of 48 major white matter fiber tracts interconnecting those regions.

To complete a Quantify analysis, the following high-resolution MRI data is required:

- Thin slice, T1-weighted sequence for volumetric measurement, gray-white matter differentiation, and brain anatomy visualization.
- Diffusion Tensor Imaging (DTI) to evaluate the integrity of the white matter tracts of the brain.

PROBLEM & OPPORTUNITY

There is still no standalone diagnostic test for mild traumatic brain injury (mTBI). Undiagnosed mTBI remains a public health challenge due to:

Persistent and Under Recognized Symptoms: Undiagnosed individuals may experience ongoing symptoms such as headaches, dizziness, and cognitive difficulties, leading to a reduced quality of life without appropriate treatment.

Cognitive and Emotional Impact: Unrecognized mTBI can result in subtle cognitive impairments, emotional changes, and behavioral challenges, affecting daily functioning, work, and relationships.

Risk of Complications and Additional Injuries: Lack of diagnosis may expose individuals to a higher risk of complications, social isolation, and a greater likelihood of sustaining a second injury, which can have more severe consequences.

MINDSET has a track record of assisting with evaluations for many different types of brain health and injury conditions, including mTBI. Quantify's sensitivity to findings from a mTBI patient make it an ideal aid in diagnosis tool. To do this, MINDSET automatically screens client imaging data for noise and artifacts before performing analyses. A statistical correction for multiple comparisons is applied to all findings. Quality control measures are built in throughout the processing pipeline, and outputs go through a rigorous screening process prior to the report being issued. When findings are present, this approach allows providers to reliably identify where abnormalities may exist in the individual's brain. When those abnormalities correlate with functional compromise, tailored action can then be taken based on the abundant reporting of actionable data.

MARKETS & MARKET SIZE

Legal: According to Lawyers.com, in 2020, there were 400,000 personal injury filings in the U.S., a surge of 97% from the previous year. However, 4% go to trial. The average compensation is $52,900 with a 70% success rate, giving a personal injury market size of $14.8B. Approximately 25% involves mTBI, indicating a US target market size of circa $4B.

Healthcare: It is estimated that 2.8M Americans sustain a TBI annually (Taylor, Bell, and Breiding, 2017); an estimated 5.3 million Americans live with a permanent TBI-related disability today (CDC 1999). And mTBI accounted for $16.7B, 44% of the estimated total lifetime cost of TBIs. (Thurman 2001).

Personal Brain Health Monitoring: Thousands of Americans have begun taking the proactive step of regularly scanning their body's health by paying out of pocket for MRI scans. While early detection of cancer through whole-body MRI has received much attention in the past year, a specialized brain health and brain aging service through the application of Quantify's precise analysis is not yet available in the market.

MANAGEMENT TEAM

Chris Airriess, PhD: As Chief Executive Officer and former CEO of industry-leading volumetric imaging company Cortechs.ai, Chris spearheaded the commercialization and adoption of its flagship clinical product NeuroQuant at® over 1,500 clinical sites in 36 countries, with medical device clearence via US FDA (510(k) and EU CE Mark.

Jules Fisher: As Chief Quality and Regulatory Officer, previously involved in four successful start-up companies as well as high-growth life science companies, Jules has worked in the healthcare industry for over 25 years with industry majors such as Smith & Nephew and Aventis Quintiles, and worked alongside companies such as Novartis and Pfizer.

Jason Kerkmans, JD: As Founder and Executive Vice President, Strategic Development, Jason identified the scalable potential of MINDSET's scientific analysis in the legal and clinical markets. Appointed to the NM Brain Injury Advisory Council, he has worked on legal briefings in state, military, and federal courts, including the US Supreme Court.

Rebecca Shore, JD: As Vice President of Clinical and Legal Operations, Rebecca brings years of experience to her role, having been an integral part of Mindset Consulting, the company's earlier iteration. Rebecca holds degrees in Science, Special Education, and Law which combine to bring a remarkable dexterity to managing a diversity of case consultation and brain science and injury expertise to her role.

TECHNOLOGIES/UNIQUE KNOW-HOW

The Company, through the acquisition [redacted] and its own research and development, has created a proprietary AI-integrated database for the analysis of individual raw MRI-sourced data, allowing for specialized evaluation of brain trauma in both a personal injury legal framework and prospective clinical settings. Regarding clinical applications, the Company plans to develop its technology to gain US FDA medical device approval under the US FDA 510(k) clearance process.

TECHNICAL BARRIERS AND COMPETITION

Unique Value Proposition

- The proprietary normative database was collected on one scanner using the same parameters and sequences.
- All scanners used to collect individual data are scaled to the database.
- Client data is automatically screened for artifacts and noise before analyses are performed.
- Multiple quality control checks are built in throughout the pipeline and a statistical correction for multiple comparisons is applied to all findings.
- Outputs go through a rigorous screening process prior to the report being issued.
- Clients can contact the MINDSET team for follow-up questions or expert referral after reviewing the report.

Leading Competitors' Solution

- In most instances, a database is not used or unknown.
- Scanners are not scaled to an original proprietary normative database.
- Clients are not screened before analyses are completed.
- There is no statistical correction for multiple comparisons.
- Quality control measures are limited or non-existent.
- Clients do not have direct access to experts or staff involved in producing the report.

PRODUCTS/SERVICES

The Quantify suite of products includes solutions such as:

- **Quantify®: Best-in-class** qMRI analysis tools for morphometry and DTI that provide unrivaled brain analysis for expert reviews.
- **Case Consultation:** Legal specialist and scientific support for civil and criminal cases involving brain health and injury.
- **CaseReview®:** Unique software specifically designed for attorneys to manage multiple facets of legal cases, including complex medical record review, complex medical record review, interactive case indexing, and compiling supporting case data.
- **Quantify Clinical:** An in-development medical device software that takes Quantify reporting into the clinical setting for mTBI.

ACHIEVEMENTS & PROGRESS

2012: The story begins. Mindset Consulting Group is created within a brain research organization to serve as a resource for connecting lawyers with reliable brain science data.

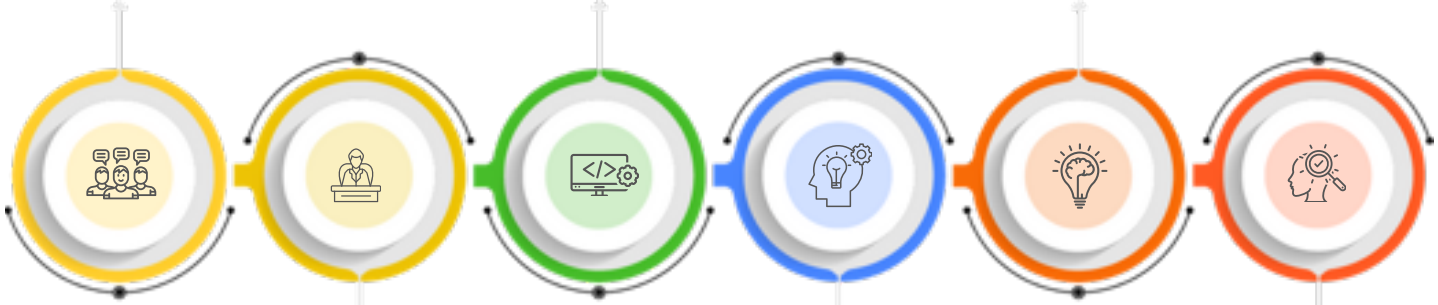
2013: A seed is planted. Founder and lead neuroscientist begins work on qMRI analyses, which will later evolve into the Quantify MRI processing pipeline.

2017: CaseReview is born. Development of cloud-based software for efficient organizing, interactive indexing, and sharing of medical and case records.

2020: Launch of MINDSET Integrated Co. as an independent entity as a spin-out from Lovelace Biomedical.

2022: Celebrating 10 years! Expanding and improving, MINDSET products get a facelift and new employees and several contractors are added to the team.

2023: Chris Airriess, PhD, joins from quantitative imaging industry specialist Cortechs.ai, bringing extensive expertise and industry insight.



CUSTOMERS

Customer base encompasses both personal injury legal firms and out-patient clinics across the US to whom the suite of Quantify products and services are marketed.
