LOGO

Tactical Engagement Plan

REFRESHER: Our Market Shaping Strategy

LOGO

BACKGROUND

Insights		Opportunities	
HCPs don't see the clinical benefit of caring for every type of Rett symptom or the full potential for progress, and therefore focus on managing only symptoms with available therapy/treatment **Caregivers** carry the responsibility of communicating care across the team and with the daily uncertainty of Rett, are often are not able get help with issues that impact daily life.	***Ultimately, progress or improvement is not defined the same way between HCPs and caregivers (clinical perceptions vs daily realities and needs).***	Limited effective treatment options have led to general **HCP** dissatisfaction with Rett care. **Caregiver** opinion, desires, and feedback will influence HCPs treatment decisions.	***A shared understanding of Rett can foster less-fragmented, more seamless communication across the care team and caregivers.***

STRATEGY

REDEFINE MANAGEMENT OPPORTUNITY IN RETT SYNDROME

Strategies

Increase awareness of the breadth and depth of needs to be addressed in Rett and encourage more comprehensive action plans

Establish connected care within the care team; **ease caregiver responsibility** with resources and information

Educational Objectives *(and associated desired behaviors)*

HCPs and caregivers have shared goals and engaging dialogue driven by a more complete understanding of Rett symptoms

(Move from singular-symptom orientation/mindset to comprehensive outlook, management, and measurement; Understand and share caregiver perspective [ie, Sharing Rett])

HCPs and caregivers can articulate meaningful clinical and behavioral progress

(Define and discuss shared expectations for goals and management that are inclusive of all aspects of Rett)

Phase 2 (post-launch): Driving suspicion & diagnosis

(Plan for broad panel genetic testing to find undiagnosed population & provide broader disease education)

LOGO

HCP DSA Tactics

HCP Message Pillars

LOGO

Gaps in Rett management	Caregivers are the patient voice	Recognizing clinical and meaningful progress	How to support unaddressed symptoms	Role of genetic testing in Rett management
It is more important than ever to recognize, identify, and understand the unmet needs of the Rett community.	Due to the progressive impact this has on patients, and loss of autonomy and verbal communication, the responsibility of understanding and speaking on the behalf of patients falls on the caregivers.	Through greater understanding of what progress can be, defined management will reinforce the importance of clinical interventions. It is important to elevate other symptoms of Rett that could benefit meaningfully from support in the overall management plan.	Rett treaters are in a unique position to help support more key areas of Rett beyond current pharmacologic treatment and established therapeutic interventions.	Rett clinical guidelines call for genetic confirmation, which may impact care and treatment of Rett patients in the future.

Key Target Behaviors - HCP

LOGO

Awareness

Increase **knowledge/understanding of RETT behavioral and communication impact** on RETT patients, families and caregivers

Education

Recognize the **importance of broader RETT impact on quality of life**

Consideration

Recognize importance of **defining what management/treatment improvements, goals, and success means** with caregivers

Targeting Approach

LOGO

By developing an efficient and sophisticated testing regimen of 1st party, 3rd party, behavioral, survey, and contextual segments across a multi-channel activation, we are designed to uncover learnings throughout the DSA campaign and analyze this data to inform branded launch.

HCPs

NPI-based specialty audiences (12)

1st party data (DSA lead capture)

IQVIA/Lasso segments

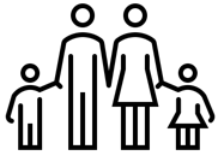
Contextual Intelligence segments (Search)

Geo-targeting COEs & HV institutions

Retargeting (opt-ins, landing page visitors)

Direct-publisher data capture

ZS data (Pending)



Caregivers

1st party Acadia data (SharingRett.com opt-in)

IQVIA/Lasso segments

Panel participants (permissioned, opt-in audiences)

Contextual Intelligence segments (Search)

Geo-targeting COEs & HV institutions

Retargeting (opt-ins, landing page visitors)

Direct-publisher data capture

HCP Targeting

LOGO

Holistic audience segmentation to reach/engage HCPs and shift mindset from limited treatment attitude to a broader and more symptom-informed position by testing combinations of these audiences throughout pre-launch.

NPI list primary specialty types:

- COE Neuro-Ped
- COE Neurology
- COE Pediatrician
- Non-COE Neuro-Ped
- Non-COE Neurology
- Non-COE Pediatrician
- COE MD/DO (any other specialty)
- COE Midlevel (any other specialty)
- Non-COE MD/DO (any other specialty)
- Non-COE Midlevel (any other specialty)
- COE non-prescriber
- Non-COE non-prescriber

Treatment teams:

- Epilepsy medications
- GI (including Laxatives and Constipation)
- Behavior meds
- Movement meds

Geo-targeting:

- COEs, health systems, child hospitals
- High-volume institutions
- Conferences (CNS, AES)

IQVIA/Lasso segments:

- HCPs diagnosing for Rett Syndrome
- HCP's reading about Rett Syndrome
- Primary specialty
- Geofencing - Rett Syndrome facilities (20)

Additional targeting sources:

- Contextual Intelligence (search volume/behavioral)
- HCP disease state awareness landing page
- Retargeting pixels

indicates priority audiences

HCP Key Channels

LOGO

Market Shaping Strategy: Increase awareness of the breadth and depth of needs to be addressed in Rett and encourage more comprehensive action plans

Awareness

Increase knowledge/understanding of RETT behavioral and communication impact on RETT patients, families and caregivers.

- *Paid Search
- *Paid Social
- *Point of Care Digital / Print
- *Programmatic Digital

Education

Recognize the importance of broader RETT impact on quality of life.

- DSA Website
- Caregiver & HCP Video Series
- *Direct-Publisher Microsite
- Email Newsletter

Consideration

Recognize importance of defining what management/treatment improvements, goals, and success means with caregivers.

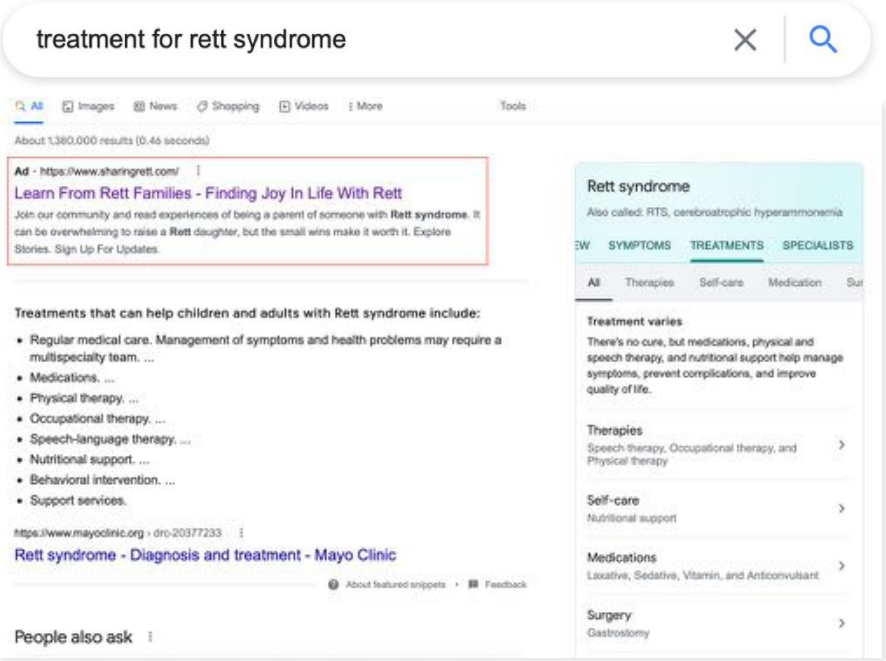
- Downloadable Assessment Tool
- Genetic Testing Downloadable Guide
- Multi-stakeholder/CNS Symposia
  - Live & Recorded KOL Webinars
  - Speaker's Bureau

* Media tactic

Key Channels & Roles: Paid Search

LOGO

Tactic | Paid Search



Rationale

- HCPs seeking new RETT information with high-intent searches

Details & Execution

- Identify top-performing keywords HCPs are searching for and clicking on
- Utilize keyword research tools to create various RETT audience personas (pre-launch learnings)
  - Non-branded (symptoms, diagnosis, genetic testing, treatment)
  - Misdiagnosis disease association (autism, cerebral palsy, epilepsy)
  - Related Rx treatments (seizures, movement disorders, behavior medications)
  - HCOs
  - KOLs
- Drive traffic to HCP disease state awareness landing page, direct-publisher microsites
- Leverage search data to inform additional audience builds for contextual targeting

Owned Creative

- Text ads with headlines and descriptions

Measurement

- Ad clicks, CTR, CPC, Quality Score

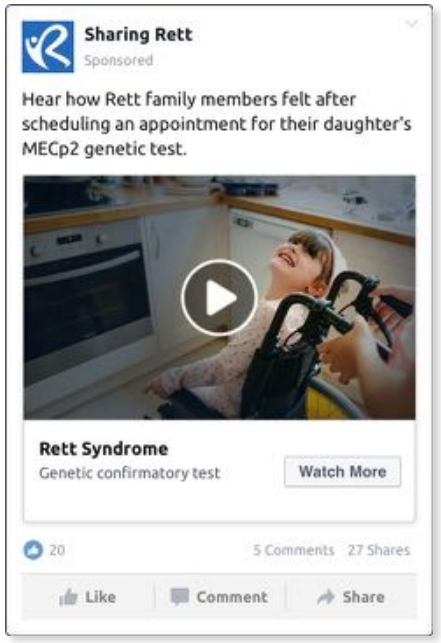
Desired Behavior

- Increase knowledge/understanding of RETT behavioral and communication impact on RETT patients, families and caregivers.

Key Channels & Roles: Paid Social

LOGO

Tactic | Paid Social



Rationale

- HCPs visiting their social networks to discuss and gain insight on professional and Rett community conversations

Details & Execution

- Drive traffic to HCP disease state awareness landing page, direct-publisher microsites
- Channel recommendations:
  - Facebook/Instagram, LinkedIn (primary)
  - TikTok, Twitter, YouTube (secondary)
- Retarget from HCP disease state awareness landing page and other pixel-captured audiences
- Can leverage existing/in-progress social data on Facebook, LinkedIn, and Twitter, etc.
- Increase spends around conventions with geo-targeting and event-specific creative

Owned Creative

- Video, image, carousel ads with headlines, descriptions, and body copy

Measurement

- Impressions, Post Engagements, Video Views, Video Completion Rate, Link Clicks, CTR, Landing Page Views, Pixel

Desired Behavior

- Increase knowledge/understanding of RETT behavioral and communication impact on RETT patients, families and caregivers.

Key Channels & Roles: Point-of-Care (Print)

LOGO

Tactic POC - Print

Physician Guides

TIME Health Pro is a first of its kind edition of the iconic TIME brand that puts an authoritative voice around topics such as public health policy, social health and more.

Rationale

- Tactile, persistent, hyper-customized content within the specialty aimed at educating HCPs and providing more resources to recommend to caregivers

Details

- TIME Health Pro, created specifically for Physicians and leading healthcare professionals
- 32-pages with 7 premium advertising positions for the brand's sole use + 1 PSA
- Quarterly, one in October and the other January
- Downloadable shareable digital edition
- Delivered directly to HCP target list

Owned Creative

- Print images, up to 7 ads, 1 PSA

Measurement

- Mailed or emailed 7-10 question qualitative survey, QR code tracking

Desired Behavior

- Increase knowledge/understanding of RETT behavioral and communication impact on RETT patients, families and caregivers.

Key Channels & Roles: Programmatic Digital

LOGO

Tactic | **Programmatic Digital**

Display & Video 360

LiveRamp

xandr

theTradeDesk

Rationale

- HCPs researching and discovering updates about RETT across industry and cultural publications

Details & Execution

- Reach and engage HCPs during their web browsing activities
- Drive traffic to HCP disease state awareness landing page, direct-publisher microsites
- Leverage search data to inform additional audience builds for contextual targeting
- Messaging and creative will rotate based on performance throughout campaign

Owned Creative
- Banner ads (native and display)

Measurement

- Impressions, Clicks, CTR, brand awareness study (pending feasibility)

Desired Behavior

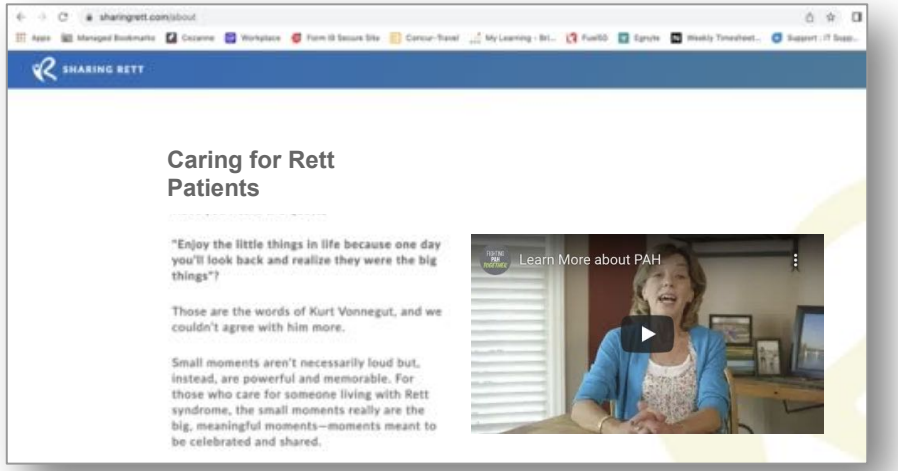
- Increase knowledge/understanding of RETT behavioral and communication impact on RETT patients, families and caregivers.

Key Channels & Roles: HCP DSA Website

LOGO

Tactic HCP DSA Website

Expected launch in late September



Rationale

- Rett treaters currently lack a comprehensive resource for increasing their knowledge around managing patients
- HCP tactics need a centralized place to drive traffic

Details & Execution

- The website would be a centralized resource for HCP DSA information and materials
- Example website pages/content sections
  - DSA overview (Key campaign messages, symptoms)
  - Diagnosis
  - Caring for Rett patients
    - Importance of comprehensive care
    - Importance of the integrated care team
    - Importance of the caregiver
    - Genetic testing Guide
  - Hosts HCP Resources
  - CRM signup for continuing information
  - Video series featuring caregivers, patient advocates, and physicians
- Website to be optimized for search engines

Owned Creative

- Web copy, images, videos

Measurement

- Unique page visits, time on page, pages per session, CTR, bounce rate, goal conversions, i.e., form fills to grow CRM, resource downloads

Desired Behavior

- Increase knowledge / understanding of RETT behavioral and communication impact on RETT patients, families and caregivers

Key Channels & Roles: Video Series

LOGO

Tactic | Video Series

Rationale

- Showcasing real patient/caregiver journeys to physicians through video content will enable faster connections for Rett treaters, and encourage more involvement with caregivers and a recognized need of comprehensive patient management
- Videos can be leveraged on DSA website and within rich media buys

Details & Execution

- Provides patient stories, testimonials, tips for connecting with patients and caregivers, resources
- Leveraging videos produced by Snow and those taken at the symposia with caregivers, advocates, and physicians
  - How caregivers and physicians measure progress, reinforce the importance of managing all symptoms, and share caregiver and advocate stories
- Leverage previously recorded testimonial videos will help physicians to recognize the importance of broader RETT impact on quality of life and consider the variation and breadth when discussing quality of life improvements with caregivers
- Keep the videos optimistic and hopeful for the future of Rett patients and their families to encourage physicians to take extra steps to ask deeper questions and listen to caregiver and patient's needs and goals
- We will keep videos short to increase the viewership of the entire video

Owned Creative

- 3 videos produced by Snow and 1 produced by Fishawack turned into smaller chapterized videos

Measurement

- Video views, video completions, shares, likes, comments

Desired Behavior

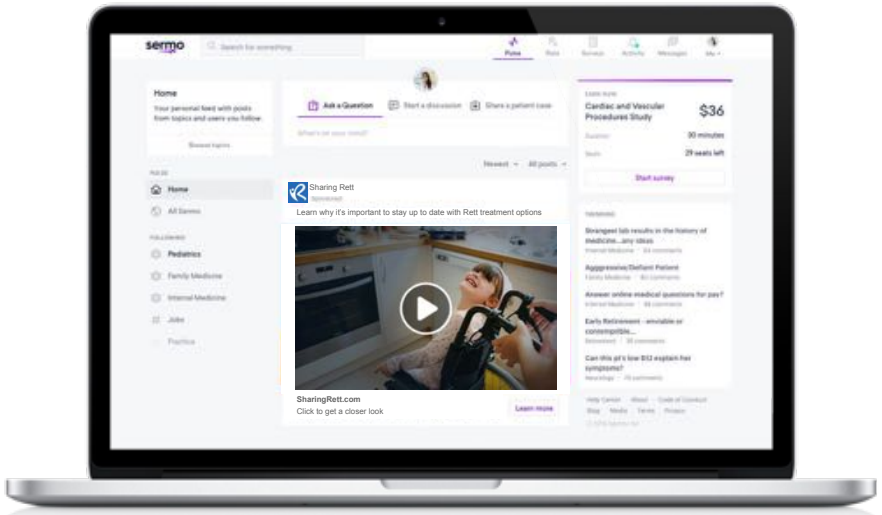
- Recognize the importance of broader RETT impact on quality of life

Key Channels & Roles: Direct-Publisher

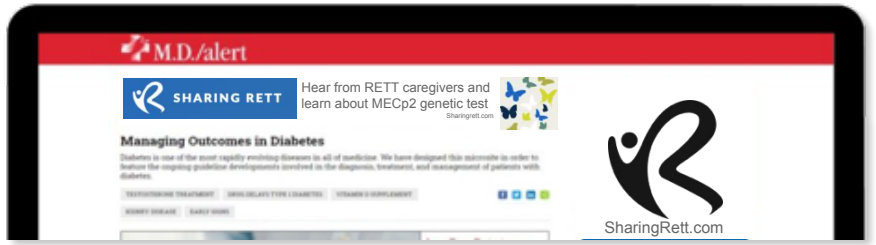
LOGO

Tactic	Direct-Publisher

sermo



M.D./alert



Rationale

- Educate and engage HCPs consulting trusted sources within their professional communities with clinical expertise and custom content built by direct-publishers

Details & Execution

- Sermo – native, feed-based videos, images, and carousel units
  - Interactive, long-form content to physicians. Post preview clicks through to an expanded post that supports images, videos, and PDFs, along with flexible commenting and polling capabilities
  - Click-through drives to HCP disease state awareness landing page
- M.D./alert - Pediatric Neurology disease education center and custom email
  - Disease center brand exclusivity, 100% SOV with display media
  - M.D., N.P. & P.A., Pharm /alerts* (email)

Owned Creative

- Videos, images, carousel ads (Sermo), and banner ads/optional email (M.D./alert)

Measurement

- HCP-level data metrics reporting with complete engagement tracking (e.g., time spent, pathing, unique prescriber identifiers, etc.), click-through, open rates, and user level data on openers

Desired Behavior

- Recognize the importance of broader RETT impact on quality of life

Key Channels and Roles: Multi-stakeholder/CNS Symposia

LOGO

Tactic	CNS Symposia

Rationale

- Leverages the live event attendees a to take part in a discussion with their peers and connect Rett experiences across those involved
- Provide HCPs who sign up for email updates a re-broadcast of relevant information on Rett with the goal of keeping them engaged up to brand launch

Details & Execution

- Main topic: Comprehensive management of Rett syndrome
- Overview of all RTT symptoms: Introduce idea of comprehensive management
  - Treatable symptoms, highlight of ”untreated” symptoms
  - Explain Rett impact on daily life
- What are meaningful ways of assessing/measuring progress in these “untreated” symptoms?
  - Probe for scales used in clinical practice
- Establish Clinical Meaningfulness of Rett improvement measurements
  - Communication around various scales and their implications for clinical practice
- How caregivers measure progress in daily lives
- Reinforcement of importance of managing all symptom areas of Rett
- Shareable caregiver stories and HCP perspectives
- Recording of live presentation
  - Cut into “bite size” video or audio components

Owned Creative

- Recorded/ re-broadcasted video of discussion panel

Measurement

- Leads collected at booth, number of post-show downloads

Desired Behavior

- Increase **knowledge/understanding of RETT behavioral and communication impact** on RETT patients, families and caregivers

Key Channels & Roles: Email

LOGO

Tactic | **Email Newsletters**

Rationale

- Provide HCPs who sign up for email updates a stream of relevant information on Rett with the goal of keeping them engaged up to brand launch

Details & Execution

- Use current target list and can purchase lists of opted-in, relevant HCPs to increase our list size and reach
- Emails will be sent automatically to HCPs who sign up for the CRM on the website
- NPI lists and retargeting capabilities with newsletters
- We recommend a monthly cadence
- Sample topics
  - Welcome / thanks for signing up
  - What is Rett / signs and symptoms
  - The importance of comprehensive care
  - Understanding the caregiver journey
  - Patient profiles

Owned Creative

- Email copy, infographics, articles, images

Measurement

- Open rate, read rate, bounces, link clicks, CTR, conversion rate, forwarding rate, unsubscribes/unsubscribe rate

Desired Behavior

- Recognize the importance of broader RETT impact on quality of life

Key Channels & Roles: Webinars

LOGO

Tactic KOL Webinars

Rationale

- HCPs respect their peers and need guidance on the best way to manage care for these patients
- HCPs do not have a lot of extra time and can watch webinars live or on demand when it fits their schedule
- HCPs searching for this kind of content will likely have high intent, given that the patient population is a small percentage of their overall case volume

Details & Execution

- Executed as part of the symposia
- This is a "reach tactic"
- Hour long webinars, live and recorded, hosted by industry key opinion leading physicians from centers of excellence discussing the breadth and depth of needs to be addressed in Rett and encouraging more comprehensive action plans.
- Webinars can be reuploaded on YouTube and the future DSA website for additional reach.

Owned Creative

- Outline, talking points, filler questions, presentation deck, images for the deck

Measurement

- Live: Webinar sign ups, number of live viewers
- Recorded: Total views, video completion rate, download volume

Desired Behavior

- Recognize importance of defining what management/treatment improvements, goals, and success means with caregivers

Key Channels & Roles: Speakers Bureau

LOGO

Tactic Speakers Bureau

Rationale

- Fellow physicians influence and educate caring physicians by sharing their experience and ways of improving the standard of care for Rett patients

Details & Execution

- Executed as part of the symposia
- This is a "reach tactic"
- Physician led presentations at conferences and symposiums throughout the year
- Rett experienced physicians will educate and guide listeners who may not have as much experience with Rett patients
- Discusses the impact of Rett, the variety of symptoms and how to manage them, how physicians can connect & effectively communicate with caregivers to provide better care and treatment planning, etc.

Owned Creative

- Outline, talking points, presentation deck, images for the deck

Measurement

- Session sign ups (for virtual), session attendees, number of rewatches

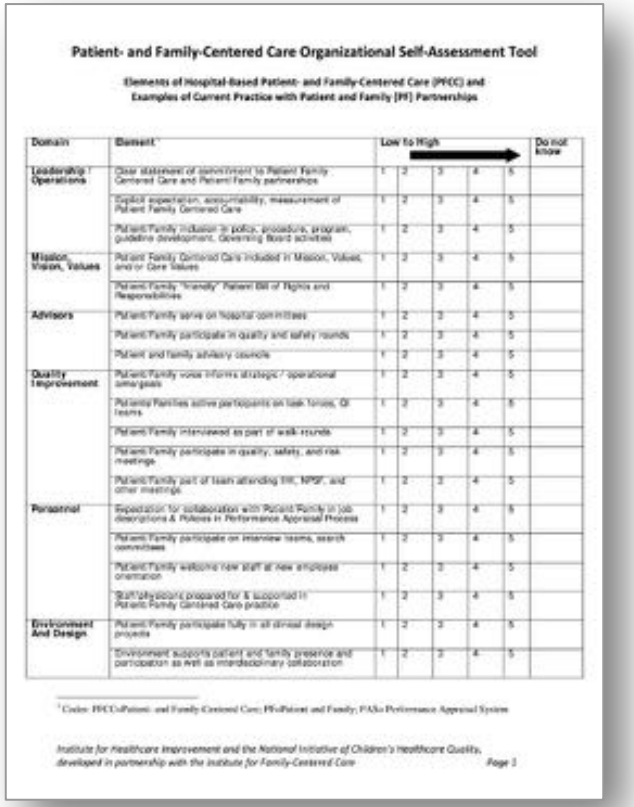
Desired Behavior

- Recognize importance of defining what management/treatment improvements, goals, and success means with caregivers.

Key Channels & Roles: Assessment Tool

LOGO

Tactic | **Assessment Tool**



Patient- and Family-Centered Care Organizational Self-Assessment Tool

Elements of Hospital-Based Patient- and Family-Centered Care (PFCC) and Examples of Current Practice with Patient and Family (PF) Partnerships

Domain	Element[1]	Low to High					Do not know
Leadership / Operations	Clear statement of commitment to Patient Family Centered Care and Patient Family partnerships	1	2	3	4	5	
	Explicit expectation, accountability, measurement of Patient Family Centered Care	1	2	3	4	5	
	Patient Family inclusion in policy, procedure, program, guideline development, Governing Board activities	1	2	3	4	5	
Mission, Vision, Values	Patient Family Centered Care included in Mission, Values, and/or Core Values	1	2	3	4	5	
	Patient Family "friendly" Patient Bill of Rights and Responsibilities	1	2	3	4	5	
Advisors	Patient Family serve on hospital committees	1	2	3	4	5	
	Patient Family participate in quality and safety rounds	1	2	3	4	5	
	Patient and family advisory councils	1	2	3	4	5	
Quality Improvement	Patient Family voice informs strategic / operational scorecards	1	2	3	4	5	
	Patients Families active participants on task forces, QI teams	1	2	3	4	5	
	Patient Family interviewed as part of walk rounds	1	2	3	4	5	
	Patient Family participate in quality, safety, and risk meetings	1	2	3	4	5	
	Patient Family part of team attending RR, MPDF, and other meetings	1	2	3	4	5	
Personnel	Expectation for collaboration with Patient Family in job descriptions & Policies in Performance Appraisal Process	1	2	3	4	5	
	Patient Family participate on interview teams, search committees	1	2	3	4	5	
	Patient Family welcome new staff at new employee orientation	1	2	3	4	5	
	Staff/physicians prepared for & supported in Patient Family Centered Care practice	1	2	3	4	5	
Environment And Design	Patient Family participate fully in all clinical design projects	1	2	3	4	5	
	Environment supports patient and family presence and participation as well as interdisciplinary collaboration	1	2	3	4	5	

[1] Codes: PFCC=Patient- and Family-Centered Care; PF=Patient and Family; PAS=Performance Appraisal System

Institute for Healthcare Improvement and the National Initiative of Children's Healthcare Quality, developed in partnership with the Institute for Family-Centered Care Page 1

Rationale

- Downloadable assessment tool will help physicians evaluate all symptoms, clinical and non-clinical, and help them discuss quality of life improvements with caregivers
- Will help physicians take a more comprehensive approach to managing Rett patients

Details & Execution

- Hosted on the DSA website for physicians to download
- Highlights key areas of Rett syndrome
- Provides probing questions for caregivers to help them express additional needs they may not be currently articulating
- Downloadable guide can be used as a guide for HCPs or as a handout for caregivers to fill out in-office for discussion during the appointment (opportunity for interactive feature eventually)

Owned Creative

- Template, form copy

Measurement

- Downloads, page views, time on page

Desired Behavior

- Recognize importance of defining what management/treatment improvements, goals, and success means with caregivers
- Increase knowledge/understanding of RETT behavioral and communication impact to RETT patients, families and caregivers

Key Channels & Roles: Genetic Testing Guide

LOGO

Tactic | Genetic Testing Guide

DNA sequencing

ASHG

News you can use

What is it?
Identification of the sequence of all the base pairs in the DNA code in order to identify genetic variation

How does it work?
Compares a patient's sequence to a ref erence sequence (or close family member) to pick out clinically important genetic variation

Different types
Whole exome (WES): protein-coding regions only
Whole genome (WGS): protein-coding and regulatory regions

Why it's important now
Technology improvements in DNA sequencing and data analysis have made it less expensive, faster and more accessible.

DNA seq has led to breakthroughs in diagnosis, cancer treatment, risk assessment, understanding complex disease mechanisms, carrier status, trait identification and ancestry.

Additional resources
A guide to interpreting genomic reports:
www.ashg.org/education/pdf /Toolkit.pdf

Jackson Labs clinical & continuing education:
https://www.jax.org/education-and-learning/-clinical-and-continuing-education

In the clinic
WES is more common as a clinical test than WGS. Insurance may cover testing depending on clinical situation

Usually offered as a 2nd or 3rd tier diagnostic test in pediatric or adult medicine after other tests have failed to find a diagnosis

Also used in oncology for diagnosis and to test tumor tissue

Who can benefit from WES?
Pediatric patients with a possible genetic disorder and symptoms that don't fit into an established syndrome

Any patient with a possible genetic disorder in whom a diagnosis has not been made using traditional tests

Cancer patients: tumor testing for personalized treatment options/prognosis and testing for hereditary cancer

Healthy individuals: health risk information, inherited traits, carrier status, ancestry

What will it tell me?
Genetic variation may not be easy to interpret.
The results of DNA sequencing may have
- clinical impact
- no clinical impact
- unexpected clinical impact
- uncertain clinical impact

"Normal" results can occur in someone with a genetic disease

Results may impact family members

Did you know...
that the genome contains about 3 billion base pairs and that we can now sequence those base pairs in about a day and for about $1000?

Rationale

- Downloadable guide will help physicians understand how they can help their patients with genetic testing by providing info on how, where, and why to get the test

Details & Execution

- Hosted and downloaded from the DSA website
- Explains the relevance of genetic confirmation of a Rett diagnosis
- Introduces Acadia's sponsored genetic testing/confirmation offering for MECP-2
- This messaging will be included in banner ads and email marketing

Owned Creative

- Template, handout copy, images

Measurement

- Downloads, page views, time on page

Desired Behavior

- Recognize the importance of broader RETT impact on quality of life

HCP Tactic Summary

Caregiver DSA Tactics

Caregiver Message Pillars

LOGO

Shortcomings of current management approaches	Understanding what is treatable	Considering your child's unique RETT management needs	Shared management goals	Genetic testing and RETT
RETT requires a tremendous amount of care that isn't always supported by prescription treatments. With nothing indicated specifically for RETT, the caregiver provides all the support and daily management to cover all the needs of their child.	There are many key symptom areas of RETT syndrome. Currently, only a few are treatable with medicine. Therapy can also be helpful with some critical symptoms that impact daily life.	This leaves many other symptom areas of RETT untreated, but that doesn't mean they aren't equally as important to consider in management plans. Think about the ways RETT impacts your daily life, and consider where you might want additional support for yourself and your child.	The ideal management plan in RETT considers available treatment for important symptoms and support for symptoms that may not necessarily be addressed. Having an open dialogue with your child's HCP can help to bridge the gap between the treatable and other symptoms to more fully support your daily life.	RETT clinical guidelines call for genetic confirmation, which may impact care and treatment options in the future.

Key Target Behaviors - Caregiver

LOGO

Awareness

Recognize the usefulness of their knowledge about their child's unique and specific symptoms, as well as their observed management shortcomings and needs and share that knowledge with other caregivers and physicians

Education

Actively and frequently discuss the unique RETT symptoms, variability, and changes

Consideration

Recognize the importance in **both defining and discussing** what potential symptom improvements and expectations for goals may look like for RETT

Caregiver Key Channels

LOGO

Market Shaping Strategy: Establish connected care within the care team; **ease caregiver responsibility** with resources and information

Awareness

CG Targeting

LOGO

Holistic audience segmentation to reach/engage caregivers and promote disease state education materials by testing combinations of these audiences throughout pre-launch.

1st party data sources:

- SharingRett.com

IQVIA/Lasso segments:

- IQVIA
- Lasso

Geo-targeting:

- COEs, health systems, child hospitals
- High-volume institutions

Exclusive audience panel data:

- Precision scaling, ultra targeted
- Permissioned, opt-in

Additional targeting sources:

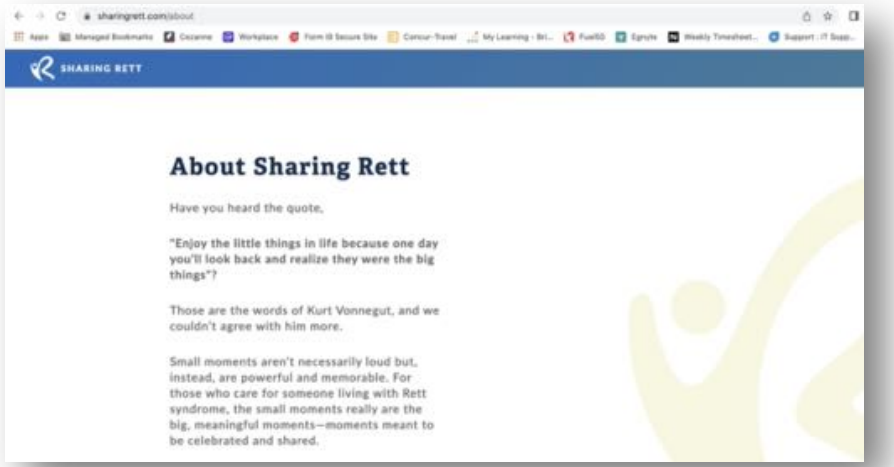
- Contextual Intelligence (search volume/behavioral)
- Retargeting pixels

Key Channels & Roles: Caregiver DSA Website

LOGO

Tactic

Expanded Caregiver DSA Website



Rationale

- Expand the sharingrett.com website to include caregiver resources to become a more comprehensive resource for Rett and to create a target for our DSA campaigns

Details & Execution

- Need to give caregivers more support so they can effectively advocate for their child and have more influence in their child's care
- Example new website pages/content sections
  - Disease management information
  - Setting expectations
  - Doctor discussion tips
  - Caregiver resources
    - Support information

Owned Creative:

- Web Copy, images, video, downloadable guides

Measurement

- Unique page visits, time on page, pages per session, CTR, bounce rate, goal conversions, i.e. form fills to grow CRM, resource downloads

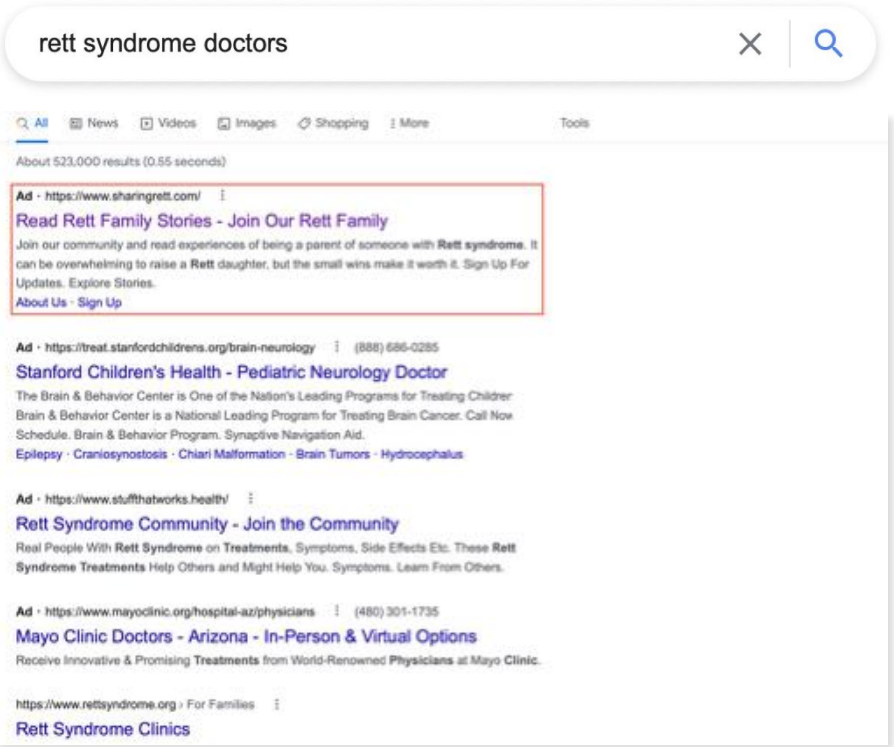
Desired Behavior

- Recognize the usefulness of their knowledge about their child's unique and specific symptoms, as well as their observed management shortcomings and needs and share that knowledge with other caregivers and physicians

Key Channels & Roles: Paid Search

LOGO

Tactic | Paid Search



Rationale

- Caregivers searching Google to research RETT developments and treatment options

Details & Execution

- Identify top-performing keywords CGs are searching for and clicking on
- Utilize keyword research tools to create various RETT audience personas (pre-launch learnings)
  - Non-branded (symptoms, diagnosis, genetic testing, treatment)
  - Misdiagnosis disease association (autism, cerebral palsy, epilepsy)
  - Related Rx treatments (seizures, movement disorders, behavior medications)
  - HCOs, KOLs
- Drive traffic to expanded SharingRett.com landing page, direct-publisher microsites
- Leverage search data to inform additional audience builds for contextual targeting

Owned Creative

- Text ads with headlines and descriptions

Measurement

- Ad clicks, CTR, CPC, Quality Score

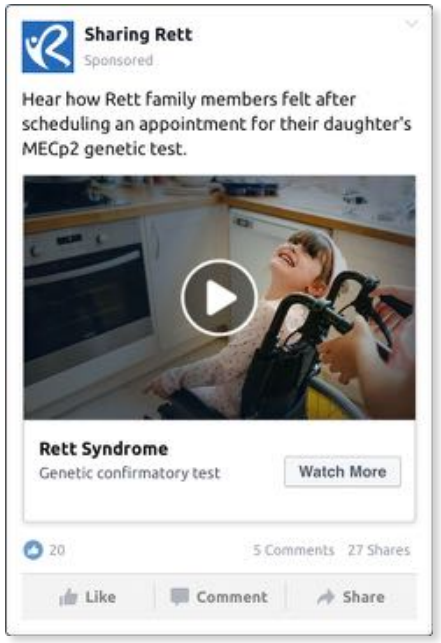
Desired Behavior

- Recognize the usefulness of their knowledge about their child's unique and specific symptoms, as well as their observed management shortcomings and needs and share that knowledge with other caregivers and physicians

Key Channels & Roles: Paid Social

LOGO

Tactic Paid Social



Rationale

- Caregivers visiting their social networks to gain insight on RETT updates and engage with their community

Details & Execution

- Drive traffic to CG disease state awareness landing page, direct-publisher microsites
- Use a mix of video, image, and carousel units to test creative reception and find CGs while they interact with their social networks by engaging with various content types
- Channel recommendations:
  - Facebook/Instagram, Twitter (primary)
  - TikTok, YouTube (secondary)
- Retarget from SharingRett.com and other pixel-captured audiences
- Increase spends around conventions with geo-targeting and event-specific creative

Owned Creative
- Video, image, and carousel ads

Measurement

- Impressions, Post Engagements, Video Views, Video Completion Rate, Link Clicks, CTR, Landing Page Views, Pixel

Desired Behavior

- Recognize the usefulness of their knowledge about their child's unique and specific symptoms, as well as their observed management shortcomings and needs and share that knowledge with other caregivers and physicians

Key Channels & Roles: Programmatic Digital

LOGO

Tactic | **Programmatic Digital**

Display & Video 360 · LiveRamp · xandr · theTradeDesk

Rationale

- Caregivers researching and discovering updates about RETT across industry and cultural publications

Details & Execution

- Reach and engage CGs during their web browsing activities
- Native/display units that span medical and trend-setting web destinations
- Drive traffic to expanded SharingRett.com landing page, direct-publisher microsites
- Leverage search data to inform additional audience builds for contextual targeting

Owned Creative
- Banner ads (display and native)

Measurement

- Impressions, Clicks, CTR, brand awareness study (pending feasibility)

Desired Behavior

- Recognize the usefulness of their knowledge about their child's unique and specific symptoms, as well as their observed management shortcomings and needs and share that knowledge with other caregivers and physicians

Key Channels & Roles: Direct-Publisher

LOGO

Tactic	Direct-Publisher

healthline

Rationale

- Caregivers researching trusted medical sites to educate themselves and seek updated information

Details & Execution

- Condition education, diagnosis/testing, treatment & research, and genetic testing updates
  - Content marketing - 100% SOV of RETT Syndrome articles on Healthline.com and MedicalNewsToday.com
  - Contextual targeting - content covering RETT Syndrome related condition categories with scale and efficiency
- Healthline articles providing education, treatment advice, and management solutions
- Medical News Today articles take a deep dive into Rett and provides a more scientific POV

Owned Creative
- Banner ads (display)

Measurement

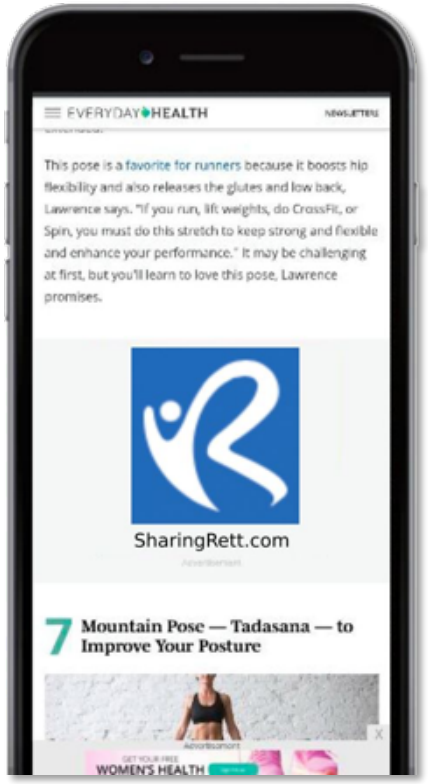
Desired Behavior

- Actively and frequently discuss the unique RETT symptoms, variability, and changes

Key Channels & Roles: Point-of-Care (Digital)

LOGO

Tactic POC - Digital



Rationale

- Timely, stimulating education at place of care with messaging to steer intent and inquiry

Details

- Target and resonate with HCO visitors on their mobile phones for up to 30 days within a custom perimeter after they leave the doctor's office
- Retarget caregivers anywhere they go, even after they leave the doctor's office up to 30 days

Owned Creative
- Mobile banner ads (display)

Measurement

- Engagement level data (pending feasibility), QR code tracking

Desired Behavior

- Recognize the usefulness of their knowledge about their child's unique and specific symptoms, as well as their observed management shortcomings and needs and share that knowledge with other caregivers and physicians

Key Channels & Roles: Point-of-Care (Print)

LOGO

Tactic | POC - Print

Rationale

- Tactile, persistent, traditional media expected within point-of-care, accessible and engaging education with hyper-customized messaging within the specialty

Details

- Health Reports, delivers soft, instructional and attainable wellness advice to caregivers
- 16-pages with up to 4 advertising positions + 1 PSA
- Content is 100% dedicated to RETT
- Built as a take-one, includes one display stand
- Downloadable digital edition via QR code
- Delivered directly to HCP target list

Creative
- Approved images, 4 ads, 1 PSA

Measurement

- Mailed or emailed 7-10 question qualitative survey, QR code tracking

Desired Behavior

- Recognize the usefulness of their knowledge about their child's unique and specific symptoms, as well as their observed management shortcomings and needs and share that knowledge with other caregivers and physicians

Key Channels & Roles: Video Series

LOGO

Tactic | Video Series

Rationale

- With videos, we can convey emotions and sincerity much more effectively rather than written content. Showing a patient's real journey using video content is a great way of connecting with caregivers

Details & Execution

- Utilize videos developed by Snow
- Utilize videos captured at symposia
- Patient stories, testimonials, tips for caregivers
- We will ensure that the narrative is comprehensible from a non-science point of view to increase relatability and encourage viewers to share it
- Keep the videos optimistic and hopeful to the future of Rett patients and their families
- Testimonial videos can help the audience make informed decisions about seeking out a new potential treatment
- We will keep videos short to increase the viewership of the entire video

Owned Creative

- Story board, closed captions, final video

Measurement

- Video views, video completions, shares, likes, comments

Desired Behavior

- Actively and frequently discuss the unique RETT symptoms, variability, and changes

Key Channels & Roles: Organic Social

LOGO

Tactic | Organic Social Media

Rationale

- Caregivers are very active and engaged on social media, turning to their peers and patient advocacy groups for advice and to share their experiences

Details & Execution

- An organic content calendar will be created to ensure alignment with messaging and consistency in posts. We will monitor caregiver support groups and advocacy organization pages to stay knowledgeable on the types of conversations being had by this audience
- Post roughly 3 times a week on various social platforms using a variety of content types such as video, infographics, polls, and images
- Example post topics
  - Patient stories
    - Share your story on sharingrett.com
  - Important dates (Rett awareness month, rare disease awareness month, etc.)
  - How to talk to your child's doctor
  - Caregiver tips
  - Caregiver resources
    - Support & advocacy groups

Owned Creative:

- Content calendar, post copy, images, video assets

Measurement

- Impressions/reach, link clicks, CTR, video completion rate, post engagement, likes, comments, shares

Desired Behavior

- Actively and frequently discuss the unique RETT symptoms, variability, and changes

Key Channels & Roles: Email Newsletters

LOGO

Tactic | **Email Newsletters**

Rationale

- Provide caregivers who sign up for email updates a stream of relevant information on Rett with the goal of keeping them engaged up to brand launch

Details & Execution

- Partner with advocacy organizations to email to their lists
- Emails sent to those who have signed up via the Sharing Rett website
- Emails will be sent automatically to caregivers who sign up for the CRM on the website
- We recommend a monthly cadence
- Example topics
  - Welcome email
  - Caregiver resources
  - Talking to your doctor
  - Upcoming events

Owned Creative

- Email copy, segmented list, infographics, images

Measurement

- Open rate, read rate, bounces, link clicks, CTR, conversion rate, forwarding rate, unsubscribes/unsubscribe rate

Desired Behavior

- Actively and frequently discuss the unique RETT symptoms, variability, and changes

Key Channels & Roles: Live & On-Demand Webinars

LOGO

Tactic | Live & On-Demand Webinars

Rationale

- Live & on-demand webinars with key experts allow caregivers to ask questions and feel like they are a part of the greater Rett community.

Details & Execution

- Sponsored webinars on industry organization websites such as AAN and AAP
- Identify 3-4 people to run the webinars. We recommend the following makeup:
  - 1 HCP KOL
  - 1-2 caregivers
  - 1-2 advocacy groups
- Topics can include
  - Talking to your doctor
  - Caregiver tips / support resources
- We would record the webinars for future use on DSE websites
- Each webinar would require a series of emails (announcement, reminder, thank you)

Owned Creative

- Presentation deck, filler questions

Measurement

- Live: Webinar sign ups, number of live viewers
- Recorded: Total views, video completion rate, download volume

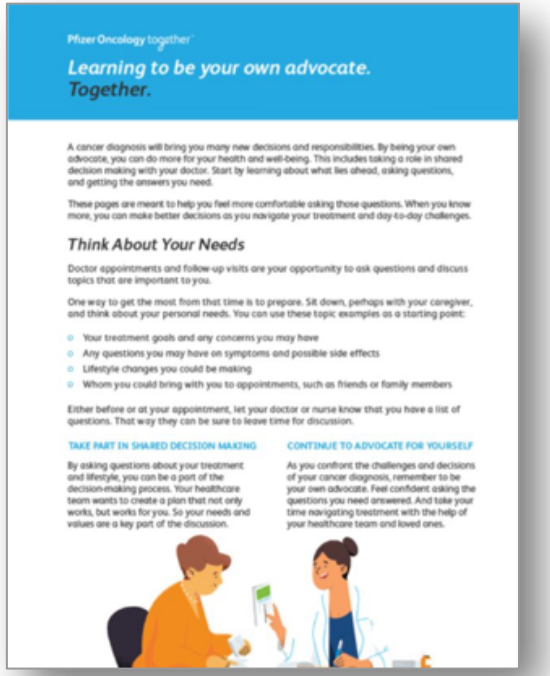
Desired Behavior

- Recognizes the importance in **both defining and discussing** what potential symptom improvements and expectations for goals may look like for RETT

Key Channels & Roles: Downloadable Resources

LOGO

Tactic | **Downloadable Resources**



Pfizer Oncology together

Learning to be your own advocate. Together.

A cancer diagnosis will bring you many new decisions and responsibilities. By being your own advocate, you can do more for your health and well-being. This includes taking a role in shared decision making with your doctor. Start by learning about what lies ahead, asking questions, and getting the answers you need.

These pages are meant to help you feel more comfortable asking those questions. When you know more, you can make better decisions as you navigate your treatment and day-to-day challenges.

Think About Your Needs

Doctor appointments and follow-up visits are your opportunity to ask questions and discuss topics that are important to you.

One way to get the most from that time is to prepare. Sit down, perhaps with your caregiver, and think about your personal needs. You can use these topic examples as a starting point:

- Your treatment goals and any concerns you may have
- Any questions you may have on symptoms and possible side effects
- Lifestyle changes you could be making
- Whom you could bring with you to appointments, such as friends or family members

Either before or at your appointment, let your doctor or nurse know that you have a list of questions. That way they can be sure to leave time for discussion.

TAKE PART IN SHARED DECISION MAKING

By asking questions about your treatment and lifestyle, you can be a part of the decision-making process. Your healthcare team wants to create a plan that not only works, but works for you. So your needs and values are a key part of the discussion.

CONTINUE TO ADVOCATE FOR YOURSELF

As you confront the challenges and decisions of your cancer diagnosis, remember to be your own advocate. Feel confident asking the questions you need answered. And take your time navigating treatment with the help of your healthcare team and loved ones.

Rationale

- Caregivers have the tools and resources needed to support their discussions and reported experiences in managing their Rett child

Details & Execution

- **Doctor discussion guide**
  - Explains how to talk with your child's doctor and how to discuss managing care
  - Provides outline of care team roles
  - Resources for getting help
  - Explains medical terminology

Genetic testing guide
- Explains the relevance of genetic confirmation of a Rett diagnosis
- Introduces Acadia's sponsored genetic testing/confirmation offering for MECP-2

- **Caregiver support guide**
  - Explains roles and responsibilities throughout HCP care team (by specialty)
  - Suggests organizations and resources that can help with the daily challenges of caregiving
  - Includes tips and tricks for keeping records of care, coordinating across specialists, and making sure all needs are addressed

Owned Creative
- Form copy, infographics, design

Measurement

- Number of downloads, time on page, page views

Desired Behavior

- Recognizes the importance in **both defining and discussing** what potential symptom improvements and expectations for goals may look like for RETT

Key Channels & Roles: Advocacy Groups

LOGO

Tactic | Advocacy Groups

Rationale

- Caregivers desire to be part of a community; many families find support from online groups and/or advocacy organizations
- They turn to these groups for support and advice, and trust their insights

Details & Execution

- Partner with advocacy groups (International Rett Syndrome Foundation, Girl Power 2 Cure, social media groups, personal blogs, CheckRare, IRSF (rettsyndrome.org), Rett Parents Council, Child Neurology Foundation, National Organization for Rare Disorders (NORD) to increase our reach to the caregiver population.
- Utilize advertising capabilities such as email blasts, sponsored webinars, sponsored content, etc. to reach the large audience of these groups

Owned Creative

- Talking points, panel questions

Measurement

- Number of new patient stories gathered, webinar registrations, email signups, email opens, email CTR, clicks

Desired Behavior

- Recognize the importance in **both defining and discussing** what potential symptom improvements and expectations for goals may look like for RETT

Key Channels & Roles: Survey

LOGO

Tactic Survey

Rationale

- Hear directly from caregivers via opt-in survey responses about their experiences with RETT and learn about their diagnosing/doctor/specialist journey

Details & Execution

- Multi-cell, permissioned audience panel data with a 2.5MM person sample size
- Develop 4-6 questions to establish patient/caregiver eligibility
  - Do you have children? YES or NO (if no, auto-terminate survey)
  - Are you a parent or caregiver to someone with Rett Syndrome?
  - Has your child experienced any of the following conditions?

Measurement

- Pending feasibility

Desired Behavior

- Recognize the usefulness of their knowledge about their child's unique and specific symptoms, as well as their observed management shortcomings and needs and share that knowledge with other caregivers and physicians

Survey Methodology

LOGO

We uncover patient insights and build custom audiences for activation in Fishawack's Patient Cloud™

Fishawack's Patient Cloud is a proprietary, category-defining insights panel that uses AI-driven modeling and precision scaling to enable the creation of privacy-first, ultra-targeted audiences for paid media execution.

1.
Patient Insights

We derive detailed insights from 2.5MM+ patients in our permissioned survey panel.

2.
AI Modeling

We use AI and machine learning to create custom models for each audience, using over 3,400 attributes.

3.
Precision Scaling

We scale each audience to precisely match the seed, with audiences as small as 5,000 people.

4.
Strategic Activation

We provide flexible ways to activate through our PMPs, on Facebook or with our expert activation team.

Fishawack's proprietary and category-defining insights panel enables us to create custom patient and caregiver audiences that are **10x more precise** that Crossix audiences.

Caregiver Tactics Summary
